

Behind satisfied customers you always find people dedicated to the success of their company – such as Alessandro Hinrichs (right) and Timo Greiner (left) and the staff of Albatross Projects.

# Excellent Service is our Passion.

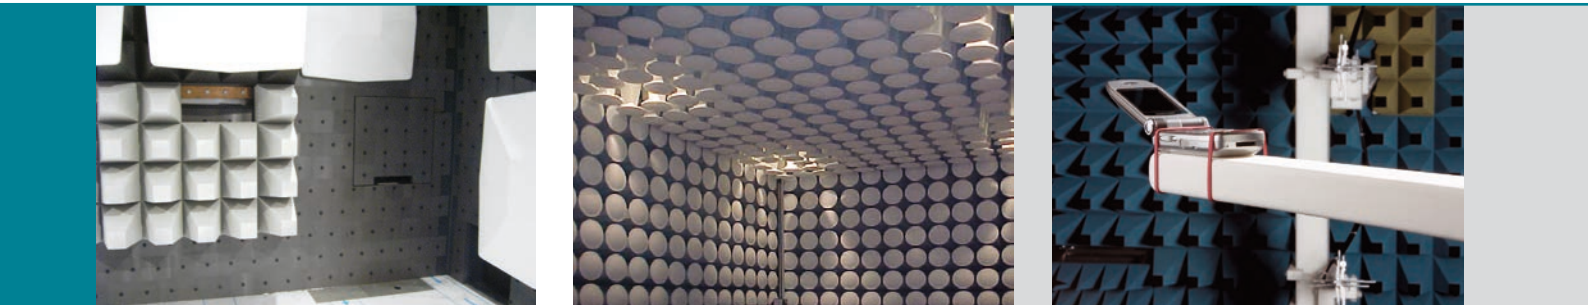

It is the attention to detail that adds quality to the EMC systems from Albatross Projects: we do our utmost to attain the best from the different system components – and from ourselves. For top performance and top solutions.

Overall safety for our customers – this is of great importance to us. Because Albatross Projects' high-quality test facilities help to reliably check the electromagnetic compatibility (EMC) of equipment and systems. Our customers can rely on that. We accordingly integrate system components to achieve optimum solutions tailored to customer requirements.

Motivated by passion and conviction, we are committed to the needs of our customers. This is reflected in excellent service. For customers who are more than customers: in fact long-term partners and allies with whom we enjoy mutual trust.

# Feel Safe with Albatross Projects.

Our customers feel safe with Albatross Projects – when working in cooperation with us as well as when dealing with our products. Mutual trust is the basis.

Albatross Projects also promotes safety for everyone: in day-to-day life we are surrounded by aids that unnoticeably make life more comfortable, enhance the quality of life and promote safety. In the mornings, when parents drive their children to school; on holiday, when flying south in search of sunshine; when surfing in an Internet café; even when visiting the doctor. All around the world and at every ima-

ginable time, people rely on electronic devices such as mobile phones or personal computers as well as on medicinal technology. And, as a result, on Albatross Projects.

We help to make the operation of these devices reliable and thus substantially contribute to a safer world and greater comfort in life.

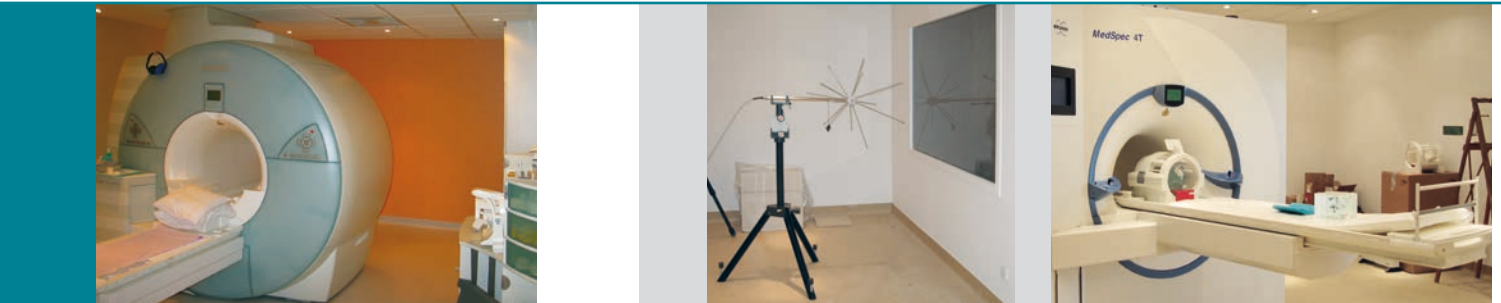

Mobile communication, base stations, networks, multi-media applications – EMC concerns the whole spectrum of telecommunication.

High-quality EMC solutions from Albatross Projects play a barely visible but important role in the application of MRI scanners and OR equipment as well as in the field of medicinal diagnostics – they form the basis for safe diagnoses and surgery.

# First-rate Solutions for a Pure World.

Only first-rate health professionals and first-rate medicinal equipment are capable of perfect harmonization – this allows a person's life to be saved and can restore the joy of life.

It is similar with the development of first-rate EMC solutions: highly qualified teams that work together optimally are essential here. Like the teams at Albatross Projects. We are continually strengthening our expertise and experience – an excellent basis for the development and production of future-oriented products. Competent, interdisciplinary teams stand by our customers at all times so perfect EMC solutions are generated together.

We also contribute to the welfare of the patient and to a world that is characterized less by illness and more by the sheer fun of life: among other things, our measuring facilities are used to test the electromagnetic compatibility of diagnosis, surgery and therapy equipment. Particularly in the field of medicine, the faultless interaction of systems can be life-saving.

# Comfortable EMC Testing Made in Germany.

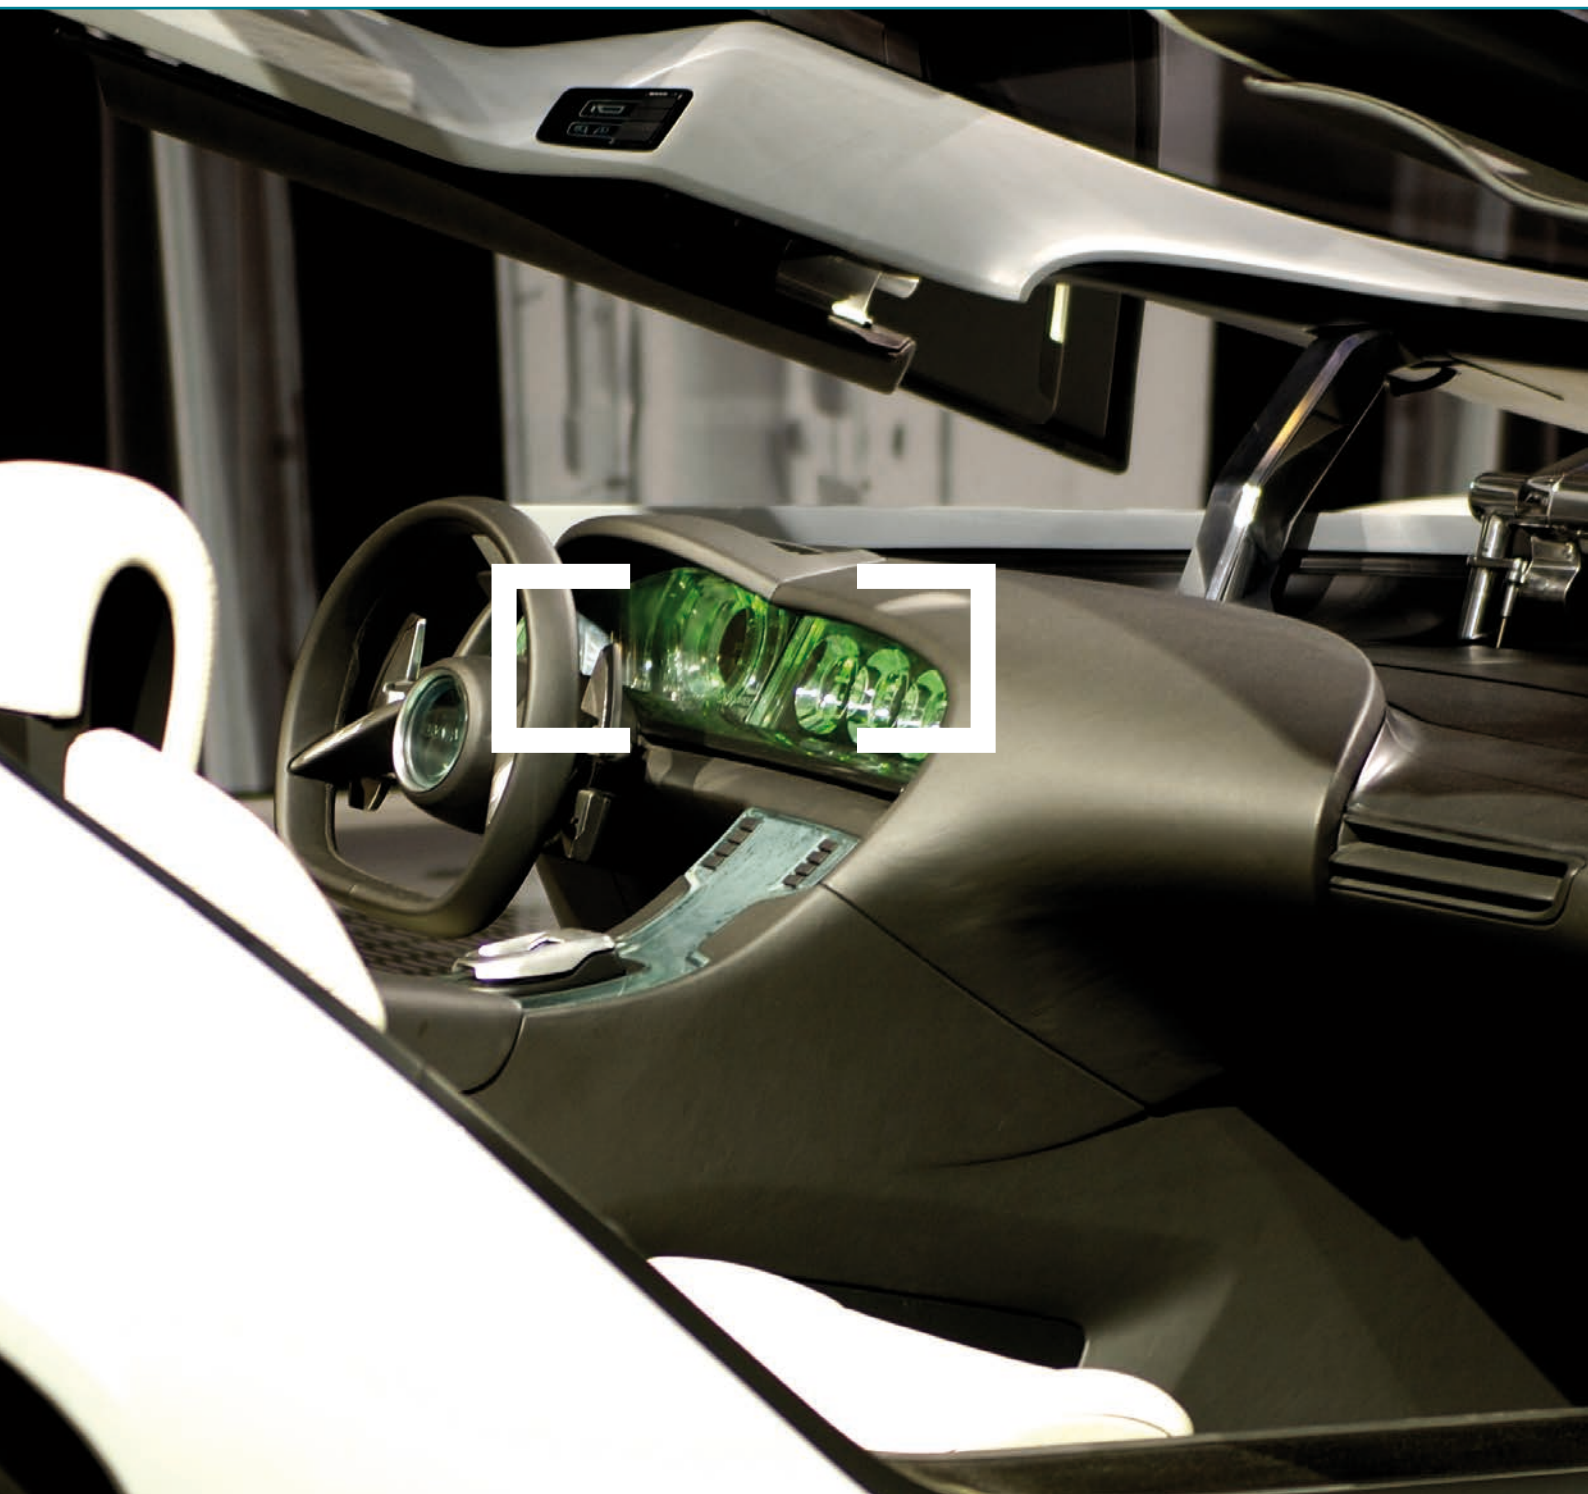

To be able to sit back in the car, have complete trust in the technology and enjoy mobility and freedom – EMC measuring technology from Albatross Projects plays a significant role here.

Working in our test facilities is almost as comfortable as driving a car. Thanks to our high quality standards, EMC testing is an easy task. Cooperation with us is similarly agreeable: right from the start, our customers have a competent contact person who attends to their wishes from initial advice and project planning through to after sales and customer support services – consequently, our customers always know who they can approach with their questions, suggestions and requests.

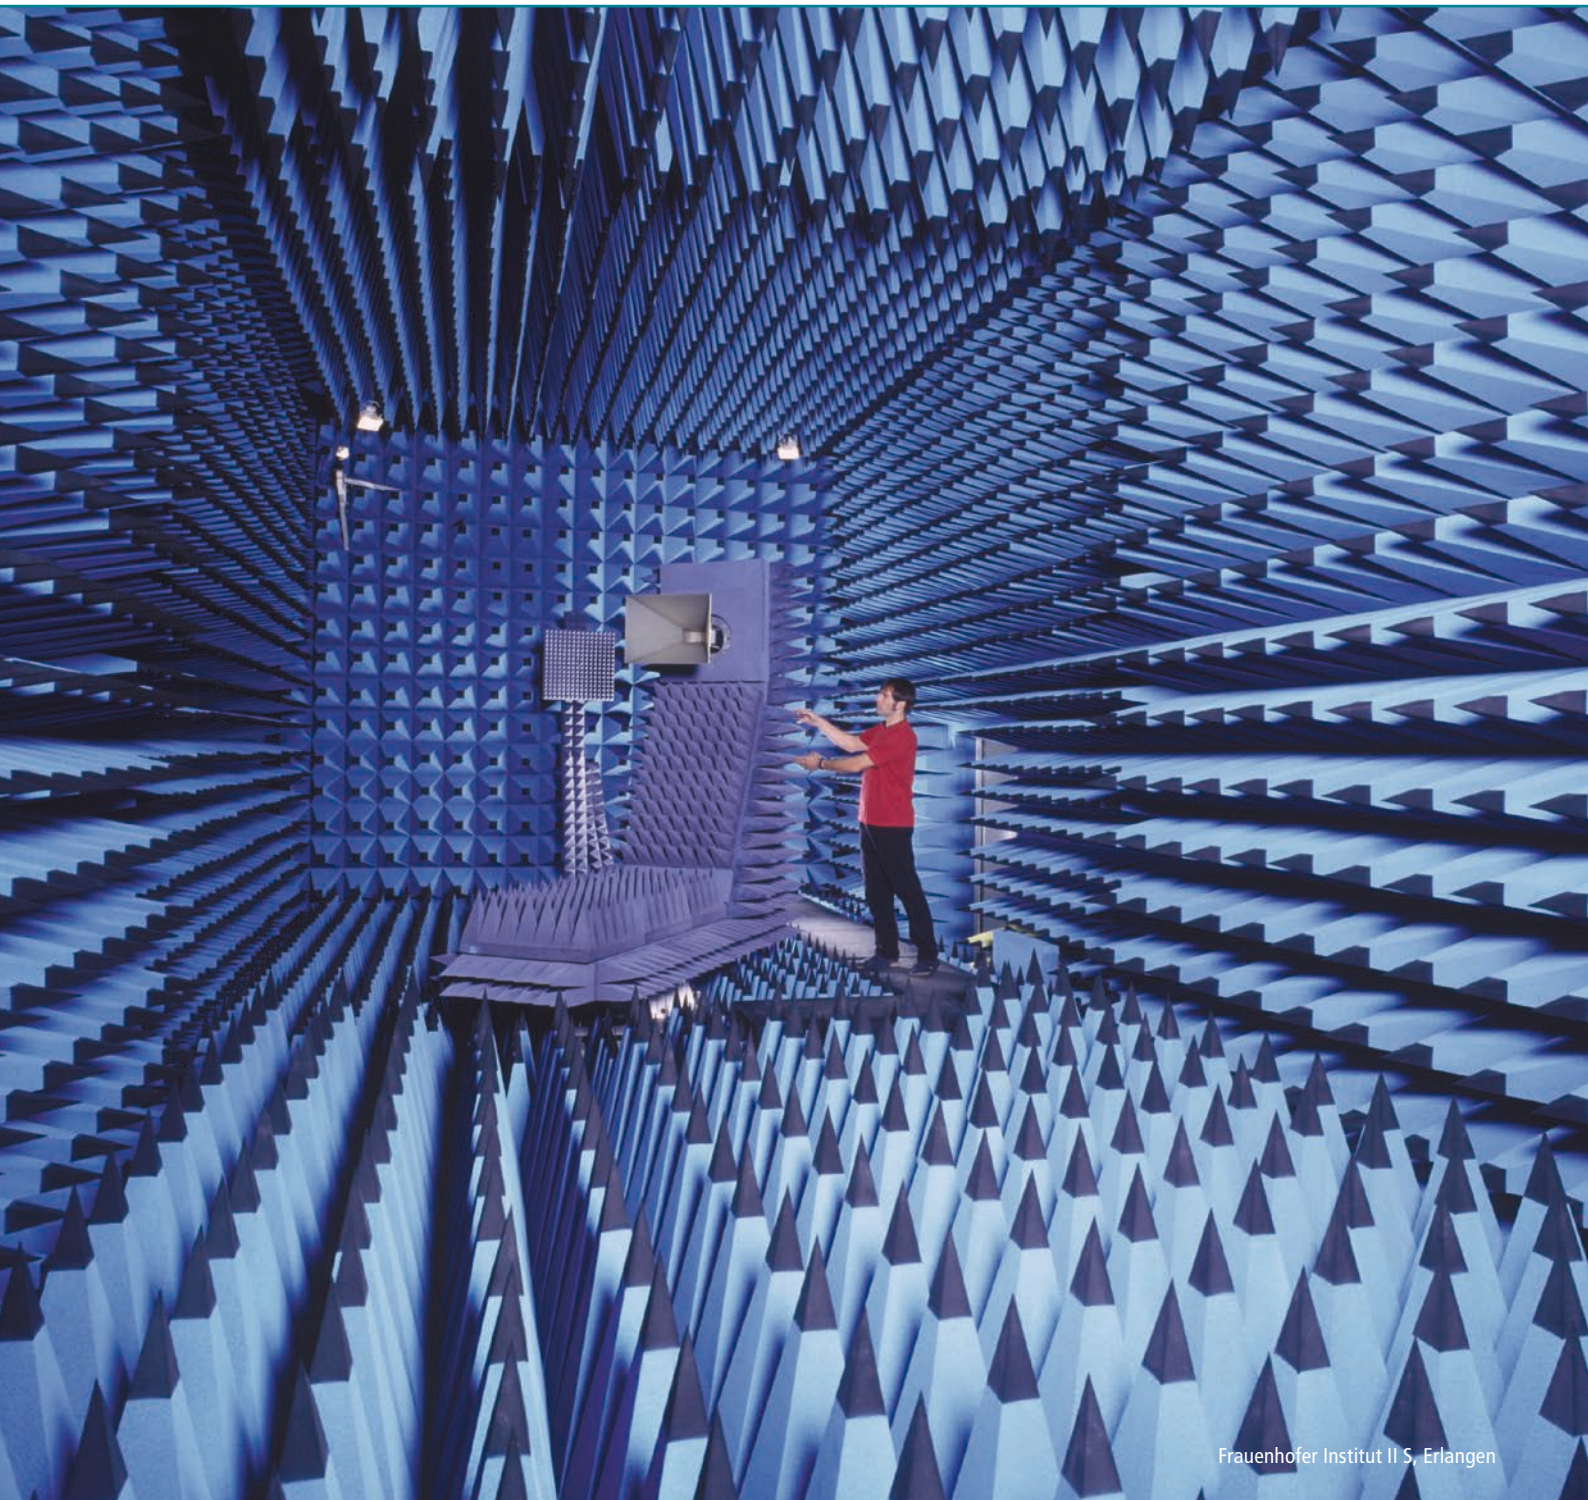

When it comes to customer support, we are able to make use of the experience and expertise of one of the most traditional German companies: in 1999 we took over the EMC business sector from Siemens Matsushita Components GmbH. Albatross Projects is rooted in a culture of long-term, networked thinking. This is reflected in solutions that are well thought-out down to the smallest detail and are based on strong, long-term ties with our customers.

ABS, ESP and airbags offer drivers security to safely reach their destination and they are optimally coordinated thanks to Albatross quality standards.

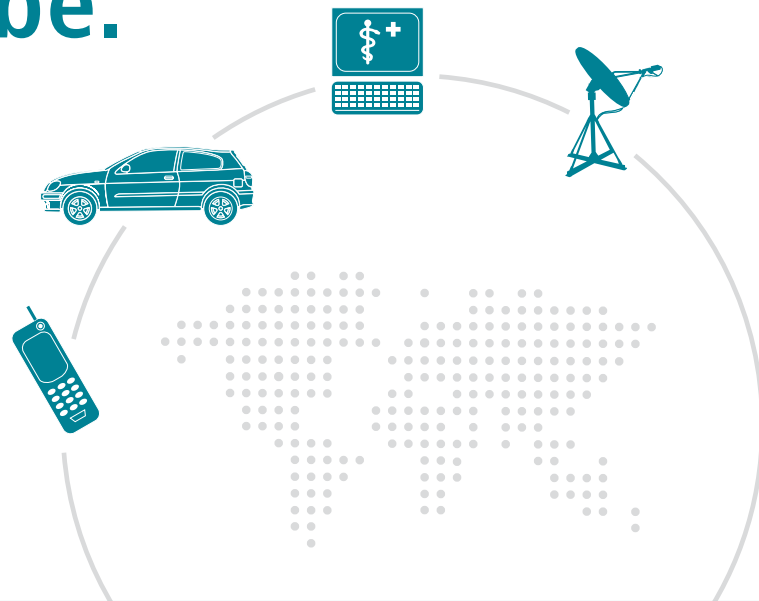

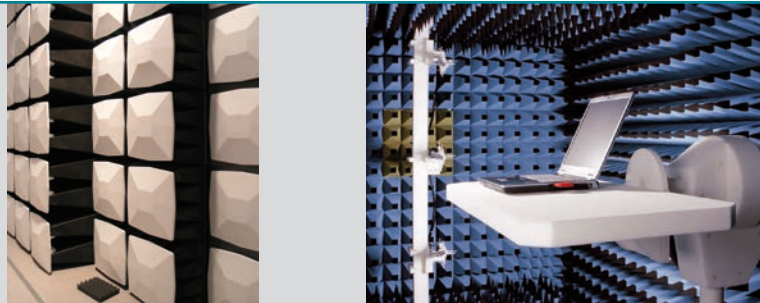

Fraunhofer Institut II S, Erlangen

Albatross Projects is the right partner when it comes to putting electronic devices and systems through their paces reliably.

# Engagement Around the Globe.

Health, mobility and communication beyond borders. These elements form the basis of modern life. Our customers develop the appropriate products. And we help them to do so.

Multifaceted and fascinating like a rainbow. This is how we see the environment in which we operate. We cooperate with different people, cultures and nationalities from various countries and sectors and offer a wide spectrum of EMC products and systems.

We are represented throughout the world and are always there where our customers need our assistance. We support our customers locally through regional companies, representatives,

support bases and independent agents in numerous countries – in every corner of the world. In our competence center in Singapore or our subsidiary in Shanghai, for example.

Perfected quality, perfectly safe, perfect customer support – attributes synonymous with Albatross Projects. Worldwide.
